

Microsoft Azure Server

Where is the server located?

- Server hosted in London

Who else uses the same servers?

- Adobe, BMW, Fedex, Toshiba, UBS, UPS, Pixar, Apple, EasyJet, Xerox, Samsung, Boeing, eBay

How is it updated?

- Access to update is by IPSEC encrypted VPN. This is very secure compared with using FTP.

How is it backed up?

- Full site back up on daily basis which is then bootable.
- The VM itself uses the shadow copies/previous versions feature which takes snapshots of the disks themselves for quick file restores.
- Backups are encrypted.

This server implementation has been chosen to meet our requirements as they grow

- Spec can be increased/decreased in minutes, at most requiring a fast reboot of the server to apply the change.
- An entire server can be prepared in 15 mins and be fully accessible to use from scratch.
